ANNUAL INDEX

SUBJECT INDEX

A

ACE inhibitors see **Angiotensin-converting-enzyme inhibitors**

AIDS
How can I trust you? 3/30:216-218 (C)
The eye in systemic disease 2: The retina. 4/15:179-200
When the skin is a harbinger of AIDS. 5/30:53-76
Viral encephalitis: When it's likely. 6/15:293-311
Treating GI symptoms in AIDS patients. 8/15:13-21 (PB)
Fatal diarrhea in an AIDS patient. 8/15:280-283 (C)
Surrogate tests for HIV. 9/30:31 (L)
I just don't want to know. 9/30:164-168 (C)
Skin lesions in a man with AIDS. 10/30:114 (C)
What finally killed this AIDS patient? 11/30:109 (C)
Brain lesions in a patient with risk factors for AIDS. 12/15:175-178 (C)

Abdominal injuries
Abdominal trauma. 11/15:44-83

Abdominal pain
Fast-track imaging in abdominal pain. 8/15:107-140
When abdominal pain strikes a child. 9/15:121-134
Abdominal imaging: Occam's razor applies. 9/30:18 (L)
Spider bites and an acute abdomen. 10/15:17-18 (L)
Abdominal imaging: Consult a surgeon first. 10/30:12 (L)

Acidosis
Acid-base emergencies. 2/15:214-231

Actinic keratoses
When actinic keratoses are a problem. 7/15:115-133

Adolescence
The triple-threat sports exam. 4/15:97-117
When abdominal pain strikes a child. 9/15:121-134
Straight talk on teen sex. 10/15:134-152

Adrenal cortex hormones
When you suspect Bell's palsy. 1/15:151-168
Elbow: Keep the whole arm in focus. 2/29:108-123
When an itch persists. 3/15:75-90
Osteoarthritis: Are you up-to-date? 3/15:99-141
Which topical corticosteroid—and when. 5/30:115-136

Adult respiratory distress syndrome see **Respiratory distress syndrome, adult**

Aged
News you shouldn't put into practice? 1/15:23 (L)
New onset hypertension in an elderly man. 1/15:197 (C)
What really works for pressure sores. 1/30:63-83
Optimal aging: The role of exercise. 3/15:35-52
Tips for treating aging skin. 3/30:61-71
Gastric cancer in a 93-year-old. 6/15:28 (L)
Help for geriatric sleep problems. 6/15:166-190
Don't overlook polymyalgia rheumatica. 7/15:243-254
Out of the hospital and into oblivion. 9/15:32 (E)
CHF in the elderly: Is it different? 9/15:40-61
Managing CHF in the older patient. 9/15:65-88
A painful lack of patient education. 9/30:32 (E)
Valve replacement in the elderly. 10/15:26 (PB)
Which drug for the aging hypertensive? 10/15:215-257

Alcoholism
Acetaminophen toxicity: Alcoholics beware. 1/15:37-40 (PB)
An alcoholic with a left pleural effusion. 1/15:198-200 (C)

Alkalosis
Acid-base emergencies. 2/15:214-231

Allergy
Immunotherapy for insect allergy. 3/30:24 (L)

Alopecia
Untangling misconceptions about hair. 5/15:193-213
Who wants to be bald? 10/15:20 (L)

Alzheimer's disease
Abuses of power over people with AD. 2/15:23 (L)
Counsel families, not just those with AD. 3/30:24 (L)

Amenorrhea
A practical approach to amenorrhea. 5/15(suppl):12-21

Analgesia, patient-controlled
Patient-controlled analgesia. 5/15:261-262 (P)

Angioplasty, transluminal
What to expect from PTCA today. 2/15:36-67
PTCA: Stress testing, alternatives to aspirin. 3/15:23 (L)
Risk from contrast in angiography. 4/30:18 (L)
PTCA and the teachable moment. 5/15:19-20 (L)
PTCA: Beyond the balloon. 6/15:60-110

Angiotensin-converting-enzyme inhibitors
Keeping up-to-date on ACE inhibitors. 7/15:38-66
Managing CHF in the older patient. 9/15:65-88
Preventing heart failure with an ACE inhibitor. 12/15:28-30 (PB)

Ankle injuries
Ankle: Don't dismiss a sprain. 2/29:6-32

Anovulation
Practical ways to monitor ovulation. 12/15:123-138

Anti-inflammatory agents
More on asthma therapy. 3/30:22-24 (L)

Anti-inflammatory agents, nonsteroidal
Osteoarthritis: Are you up-to-date? 3/15:99-141
Rating the toxicity of NSAIDs. 5/15:34-39 (PB)
Clarification: Two new NSAIDs. 11/30:20 (L)

Antibiotics
Tonsillectomy today: Who needs it? 1/15:173-194
Action of meropenem. 3/15:24 (L)
PID: Hard to find, essential to treat. 3/30:30-54
An update on sinusitis. 4/30:141-163
Does antibiotic prophylaxis help? 6/15:113-129
Fever and rash after a splenorenal shunt. 6/15:336-337 (C)
Staying on top of mitral valve prolapse. 10/15:32-50
When to consider empiric antibiotics. 12/15:141-170

Anticholesteremic agents
Low-dose and short-term lipid-lowering therapy. 3/30:22 (L)

Anticoagulants
Fine-tuning anticoagulant therapy. 5/15:69-87
Mixing aspirin and anticoagulants. 10/15:18-20 (L)

Antidepressive agents
Don't overlook depression. 2/15:155-188
Cold turkey, or a legitimate beef? 9/15:206-207 (C)
Tricyclics for IBS. 10/30:13 (L)

Antihistaminics see **Histamine H1 receptor blockaders**

Antihypertensive agents
Which drug for the aging hypertensive? 10/15:215-257
Hypertension with concomitant diseases. 11/30:105 (C)

Antilipemic agents
Gemfibrozil-lovastatin: Effective, but safe? 12/15:30-34 (PB)

Anxiety
Panic disorder: A treatable problem. 4/30:81-107

Appetite depressants
Obesity: A quartet of approaches. 9/15:157-199

Arrhythmia
Symptomatic arrhythmias. 11/15:176-220

Arthritis, reactive
Fever and joint pain cramp a European jaunt. 6/15:332-333 (C)

Arthritis, rheumatoid
Minocycline trials in rheumatoid arthritis. 1/30:20-22 (L)
Do you really need that test? 2/15:24 (L)
Drug therapy in rheumatoid arthritis. 9/15:111-119

Legend

C	Case & Comment	PB	Practical Briefings
E	Guest Editorial	P	Procedures for Your Practice
L	Letter		

Ascorbic acid
Does vitamin C protect against UVA and UVB? 5/30:14-17 (PB)
Aspirin
Who should have prophylactic aspirin? 6/15:312-326
Mixing aspirin and anticoagulants. 10/15:18-20 (L)
Asthma
Asthma therapy: Into the 1990s. 1/15:69-100
Asthma in the elderly: What's different? 2/15:22 (L)
More on asthma therapy. 3/30:22-24 (L)
When a cough just won't go away. 4/15:64-86
Atrial fibrillation
Lowering stroke risk in atrial fibrillation. 2/15:33-34 (PB)
Risk factors for stroke in atrial fibrillation. 4/15:28-34 (PB)
Atrioventricular block see **Heart block**
Attention deficit disorder with hyperactivity
Helping the hyperactive child. 3/30:96-116
The long haul with a hyperactive child. 4/30:18 (L)
The hyperactive child: An urban problem? 5/15:19 (L)
Physician advocates in hyperactivity. 6/15:29-30 (L)
Does sugar really make children act up? 7/15:26-28 (PB)
Diet and hyperactivity: A clear connection? 9/30:31 (L)
Focusing attention on attention deficits. 11/30:20 (L)

B

Backache
A simple approach to back-pain management. 12/15:77-92
Barrett esophagus
Alarming trends in esophageal cancer. 10/15:72-122
Behavior therapy
Helping the hyperactive child. 3/30:96-116
Obesity: A quartet of approaches. 9/15:157-199
Bell's palsy see **Facial paralysis**
Bites and stings
Bites and stings: It's that time of year. 5/30:79-110
Breast neoplasms
Breast cancer in young women. 4/15:28 (PB)
Breast cancer and the pill. 11/30:67-82
Bronchodilator agents
COPD: Incurable but not untreatable. 1/30:31-58
Brucellosis
A diagnosis cast in concrete? 3/30:234-235 (C)
A tired farmer who's losing weight. 4/30:169-170 (C)
Burns, chemical
Chemical burns. 2/15:232-248
Hydrofluoric acid burns to the eye. 4/30:17 (L)

C

Calcium channel blockers
Calcium antagonists in the elderly. 1/30:20 (L)
Cancer see **Neoplasms**
Candidiasis
Managing problem vaginitis. 9/15:137-152 (Correction 12/15:24)
Cardiomyopathy, hypertrophic
Cardiac hypertrophy: Practice implications. 5/15:88-122
Cardiovascular diseases
High blood glucose and CVD risk. 1/30:27 (PB)
Borderline hypertension and cardiac risk factors. 1/30:109-110 (C)
Who should have prophylactic aspirin? 6/15:312-326
Managing CVD risk in diabetes. 10/30:24-61
Carotid artery diseases
Concomitant carotid and coronary disease. 1/15:48-66
Doppler can replace arteriography. 3/30:24 (L)
Cat-scratch disease
Lymphadenopathy two years postmastectomy. 9/30:156-157 (C)
Cathartics
Encopresis: 20 management mistakes. 8/15:221-231
Central nervous system agents
Helping the hyperactive child. 3/30:96-116
Cerebrovascular disorders
Lowering stroke risk in atrial fibrillation. 2/15:33-34 (PB)
Risk factors for stroke in atrial fibrillation. 4/15:28-34 (PB)
Think subarachnoid hemorrhage early! 4/30:108-122
Who should have prophylactic aspirin? 6/15:312-326
Intracranial hemorrhage after thrombolysis. 7/15:26 (PB)
Chemotherapy see **Drug therapy**
Child abuse, sexual
Persistent symptoms? Think sexual abuse. 9/15:27 (L)
Chlamydia infections
Chlamydia: The challenge is diagnosis. 2/15:69-84
PID: Hard to find, essential to treat. 3/30:30-54
Cholesterol
Lipid-lowering guidelines for women. 2/15:21-22 (L)
Low-dose and short-term lipid-lowering therapy. 3/30:22 (L)
When cholesterol levels are too low. 3/30:24 (L)
Chronic obstructive pulmonary disease see **Lung diseases, obstructive**
Chylothorax
Fast-track effusion care. 2/15:92-133
Clinical practice guidelines
Managing urinary incontinence in women. 7/15:79-112
Clinical trials
Clinical trials: A readers' guide. 11/30:85-102
Cochlear implant
New reasons for hope in hearing loss. 3/30:75-95
Colitis
Hemorrhagic colitis and a new *E. coli*. 3/15:64-73
Colitis, ulcerative
Cancer screening in colitis patients. 8/15:21-24 (PB)
Current concepts, new therapies in IBD. 8/15:79-102
Colonic diseases, functional
Approaching IBS with confidence. 8/15:175-210
Keys to managing IBS. 9/30:18-30 (L)
Tricyclics for IBS. 10/30:13 (L)
Psychoactive meds: A role in IBS? 12/15:24 (L)
Colorectal neoplasms
On the alert for colorectal cancer. 4/15:151-161
Sigmoidoscopy screening in practice. 6/15:27-28 (L)
Common cold
When a cough just won't go away. 4/15:64-86
Communicable diseases
Tonsillectomy today: Who needs it? 1/15:173-194
Chlamydia: The challenge is diagnosis. 2/15:69-84
Fever, headache, and rash in an athletic woman. 2/15:250-254 (C)
Hemorrhagic colitis and a new *E. coli*. 3/15:64-73
It wasn't hepatitis, it wasn't pneumonia. 4/15:203-206 (C)
An unusual, fatal case of hepatitis. 4/15:207-208 (C)
TB: Coming soon to your town? 5/15:40-66
Viral encephalitis: When it's likely. 6/15:293-311
The ABCs of viral hepatitis. 8/15:34-50
Update on adult immunization. 9/30:113-123
Viral infections—making the diagnosis. 10/15:157-184
Communication
The patient with acute myelocytic leukemia. 1/30:102-105 (C)
The incomprehensible patient. 2/15:249 (C)
Please step this way. 3/15:239 (C)
How can I trust you? 3/30:216-218 (C)
Lots of help. 4/15:210-215 (C)
Hyperbole, indeed. 5/15:249 (C)
When they moved the building. 6/15:340-343 (C)
Do you have to do an examination? 7/15:274-277 (C)
I just don't want to know. 9/30:164-168
A nosy doctor. 10/30:104-105 (C)
I'm sick, doctor. 12/15:172-174 (C)
Congestive heart failure see **Heart failure, congestive**
Conjunctival diseases
The eye in systemic disease 1: Anterior structures. 4/15:162-174
Constipation
Encopresis: 20 management mistakes. 8/15:221-231
Contact lenses
Red eyes and contact lenses. 5/15:143-157
Contraception
Norplant insertion and removal. 3/15:231-238 (P)
Contraceptive agents
Norplant insertion and removal. 3/15:231-238 (P)
Breast cancer and the pill. 11/30:67-82
Corneal diseases
The eye in systemic disease 1: Anterior structures. 4/15:162-174
Coronary arteriosclerosis
What to expect from PTCA today. 2/15:36-67
Risk from contrast in angiography. 4/30:18 (L)
Coronary artery bypass
Concomitant carotid and coronary disease. 1/15:48-66
Coronary disease
The family doctor as compleat physician. 1/15:20 (L)
Concomitant carotid and coronary disease. 1/15:48-66
Syncope as a diagnostic challenge. 1/15:105-126

Coronary disease *continued*
Cholesterol and fat: Honing the numbers. 1/30:20 (L)
When to worry about silent ischemia. 1/30:84-100
A strict diet for asymptomatic patients? 2/15:22-23 (L)
Heart disease in women: How different? 2/15:191-204
Doppler can replace arteriography. 3/30:24 (L)
A better way to reverse CAD? 5/15:20 (L)
Corticosteroids see **Adrenal cortex hormones**
Cosmetics
When to suspect cosmetic dermatitis. 6/15:131-165
Answering patients' skin care questions. 9/30:133-149
Cough
When a cough just won't go away. 4/15:64-86
Counseling
Don't overlook depression. 2/15:155-188
Reaching out to the family in crisis. 4/30:125-136
The family with Münchausen syndrome. 6/15:27 (L)
Treating the child with persistent symptoms. 6/15:197-210
Persistent symptoms and third-party payers. 9/30:30 (L)
Hysterectomy and sexual dysfunction: You can help. 9/30:67-82
Straight talk on teen sex. 10/15:134-152
Helping families in crisis. 10/30:12 (L)
The 10-minute visit: Make it work. 11/30:55-62
Crohn disease
Current concepts, new therapies in IBD. 8/15.79-102
In Crohn's therapy, no narrowing of choices. 8/15:272-277 (C)
Cystic fibrosis
An emergency in an adult CF patient. 4/30:164-169 (C)
A young adult with cough and weight loss. 6/15:333-336 (C)
Cytomegaloviruses
A depressed woman with abnormal liver function. 5/15:244-245 (C)

D

Decubitus ulcer
What really works for pressure sores. 1/30:63-83
Cure pressure sores, and save money. 4/30:17-18 (L)
Deglutition disorders
A diagnosis that's hard to swallow. 8/15:278 (C)
A new, commonsense approach to dysphagia. 9/30:87-108
Dehydration
Why give IV fluids to the dying? 7/15:71-74
Diet soda is for dieters only. 9/15:31 (L)
Depression
Don't overlook depression. 2/15:155-188
Depression, stress, drugs, and suicide. 3/30:21-22 (L)
Dermatitis, contact
When to suspect cosmetic dermatitis. 6/15:131-165
Dermatology
Dynamism in dermatology. 5/30:7-8 (E)
Designer drugs
Street and designer drugs. 11/15:118-157
Diabetes mellitus
High blood glucose and CVD risk. 1/30:27 (PB)
Managing CVD risk in diabetes. 10/30:24-61
Diabetes mellitus, non-insulin-dependent
Women who exercise: Lowering diabetes risk. 3/15:26 (PB)
Diagnostic imaging
Pancreatic cancer: What you need to know. 3/30:151-170
An update on sinusitis. 4/30:141-163
Fast-track imaging in abdominal pain. 8/15:107-140
A new, commonsense approach to dysphagia. 9/30:87-108
Pneumonia: Reading chest films right. 12/15:40-72
Diarrhea
Evaluating persistent diarrhea in kids. 7/15:179-198
Fatal diarrhea in an AIDS patient. 8/15:280-283 (C)
Diet
Obesity: A quartet of approaches. 9/15:157-199
Diet and hyperactivity: A clear connection? 9/30:31 (L)
Digitalis
Digitalis, digoxin: What's in a name? 2/15:24 (L)
Disability evaluation
Who determines disability? 4/30:21 (PB)
Drug evaluation
Minocycline trials in rheumatoid arthritis. 1/30:20-22 (L)
Drug interactions
Blood from a stone, or from polypharmacy? 7/15:278-280 (C)
Drug therapy
Acetaminophen toxicity: Alcoholics beware. 1/15:37-40 (PB)
Asthma therapy: Into the 1990s. 1/15:69-100
Pneumonia: Choosing empiric therapy. 1/15:129-148
Lipid-lowering guidelines for women. 2/15:21-22 (L)
Hodgkin's today: It's controllable. 3/15:174-192
Update on Parkinson's disease. 3/30:172-208
Helping your patient cope with migraine. 4/15:44-54
What's new in stomach cancer? 4/30:22-59
Rating the toxicity of NSAIDs. 5/15:34-39 (PB)
TB: Coming soon to your town? 5/15:40-66
Fine-tuning anticoagulant therapy. 5/15:69-87
Cardiac hypertrophy: Practice implications. 5/15:88-122
Using medication wisely in chronic pain. 5/15:125-139
Hypertension therapy: The first steps. 5/15:161-189
Retinoids: What role in your practice? 5/30:18-45
When the skin is a harbinger of AIDS. 5/30:53-76
Which topical corticosteroid—and when. 5/30:115-136
Waging war on psoriasis. 5/30:145-175
From depression to confusion. 6/15:329-330 (C)

Using today's antivirals. 11/30:28-48
When to consider empiric antibiotics. 12/15:141-170
Drug therapy/adverse effects
Rating the toxicity of NSAIDs. 5/15:34-39 (PB)
Hearing loss: Which drug caused it? 5/15:238-242 (C)
Retinoids: What role in your practice? 5/30:18-45
Cold turkey, or a legitimate beef? 9/15:206-207 (C)
Dupuytren's contracture
Hand RA and Dupuytren's contracture. 2/15:24 (L)
Dysphagia see **Deglutition disorders**

E

Echocardiography
Staying on top of mitral valve prolapse. 10/15:32-50
Education, medical
Family crises: Prescription for failure? 7/15:18-25 (L)
Elbow
Rehab for overuse tendinitis of the elbow. 3/30:21 (L)
Elbow joint
Elbow: Keep the whole arm in focus. 2/29:108-123
Elbow trauma: Fine-tuning the diagnosis. 6/15:28-29 (L)
Hairstylist's elbow. 7/15:18 (L)
Electric injuries
Electrical and lightning injuries. 11/15:158-175
Electrocardiography
Syncope as a diagnostic challenge. 1/15:105-126
When to worry about silent ischemia. 1/30:84-100
What degree of AV block? 2/15:259-261 (C)
One problem or two? 3/30:211-215 (C)
Any flashing 'lytes? 4/30:172 (C)
Symptomatic arrhythmias. 11/15:176-220
Electrolytes
Any flashing 'lytes? 4/30:172 (C)
Emergencies
Acid-base emergencies. 2/15:214-231
Chemical burns. 2/15:232-248
Think subarachnoid hemorrhage early! 4/30:108-122
Emergency care for the failing heart. 7/15:161-174
Practicing in the real world. 10/15:187-212
60 minutes to treatment: New goal for AMI? 11/15:25-36 (PB)
Is IV magnesium now the standard of care in AMI? 11/15:36-38 (PB)
Abdominal trauma. 11/15:44-83

BIAXIN™

(Clarithromycin)

Filmtab® Tablets

BRIEF SUMMARY
CONSULT PACKAGE INSERT FOR FULL PRESCRIBING INFORMATION

INDICATIONS AND USAGE

BIAXIN (Clarithromycin) is indicated for the treatment of mild to moderate infections caused by susceptible strains of the designated microorganisms in the conditions listed below:

Upper Respiratory Tract Infections:

Pharyngitis/Tonsillitis due to *Streptococcus pyogenes*

Acute bacterial sinusitis due to *Streptococcus pneumoniae*

Lower Respiratory Tract Infections:

Acute bacterial exacerbation of chronic bronchitis due to *Haemophilus influenzae*, *Moraxella catarrhalis* or *Streptococcus pneumoniae*

Pneumonia due to *Mycoplasma pneumoniae* or *Streptococcus pneumoniae*

Uncomplicated Skin and Skin Structure Infections due to *Staphylococcus aureus* or *Streptococcus pyogenes*. Abscesses usually require surgical drainage.

CONTRAINDICATIONS

Clarithromycin is contraindicated in patients with a known hypersensitivity to clarithromycin, erythromycin or any of the macrolide antibiotics.

WARNINGS

CLARITHROMYCIN SHOULD NOT BE USED IN PREGNANT WOMEN EXCEPT IN CLINICAL CIRCUMSTANCES WHERE NO ALTERNATIVE THERAPY IS APPROPRIATE. IF PREGNANCY OCCURS WHILE TAKING THIS DRUG, THE PATIENT SHOULD BE APPRISED OF THE POTENTIAL HAZARD TO THE FETUS. CLARITHROMYCIN HAS DEMONSTRATED ADVERSE EFFECTS ON PREGNANCY OUTCOME AND/OR EMBRYO-FETAL DEVELOPMENT IN MONKEYS, RATS, MICE, AND RABBITS AT DOSES THAT PRODUCED PLASMA LEVELS 2 TO 17 TIMES THE SERUM LEVELS ACHIEVED IN HUMANS TREATED AT THE MAXIMUM RECOMMENDED HUMAN DOSES. (SEE PREGNANCY.)

Pseudomembranous colitis has been reported with nearly all antibacterial agents, including macrolides, and may range in severity from mild to life-threatening. Therefore, it is important to consider this diagnosis in patients who present with diarrhea subsequent to the administration of antibacterial agents.

Treatment with antibacterial agents alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is a primary cause of "antibiotic-associated colitis."

After the diagnosis of pseudomembranous colitis has been established, therapeutic measures should be initiated. Mild cases of pseudomembranous colitis usually respond to discontinuation of the drug alone. In moderate to severe cases, consideration should be given to management with fluids and electrolytes, protein supplementation, and treatment with an antibacterial drug effective against *Clostridium difficile*.

PRECAUTIONS

General: Clarithromycin is principally excreted via the liver and kidney. Clarithromycin may be administered without dosage adjustment to patients with hepatic impairment and normal renal function. However, in the presence of severe renal impairment with or without coexisting hepatic impairment, decreased dosage intervals may be appropriate.

Drug Interactions: Clarithromycin use in patients who are receiving theophylline may be associated with an increase of serum theophylline concentrations. Monitoring of serum theophylline concentrations should be considered for patients receiving high doses of theophylline or with baseline concentrations in the upper therapeutic ranges. In two studies in which theophylline was administered with clarithromycin (a theophylline sustained-released formulation was dosed at either 6.5 mg/kg or 12 mg/kg together with 250 mg or 500 mg q 12 h clarithromycin), the steady-state levels of Cmax, Cmin, and the area under the serum concentration-time curve (AUC) increased about 20%.

Single-dose administration of clarithromycin has been shown to result in increased concentrations of carbamazepine. Blood level monitoring of carbamazepine may be considered.

The following drug interactions have not been reported in clinical trials with clarithromycin; however, they have been observed with erythromycin products:

Concomitant administration of erythromycin and digoxin has been reported to result in elevated digoxin levels.

There have been reports of increased anticoagulant effects when erythromycin and oral anticoagulants were used concomitantly.

Concurrent use of erythromycin and ergotamine or dihydroergotamine has been associated in some patients with acute ergot toxicity characterized by severe peripheral vasospasm and dysesthesia.

Erythromycin has been reported to decrease the clearance of triazolam and thus may increase the pharmacologic effect of triazolam.

The use of erythromycin in patients concurrently taking drugs metabolized by the cytochrome P450 system may be associated with elevations in serum levels of these other drugs. There have been reports of interactions of erythromycin with carbamazepine, cyclosporine, hexobarbital, and phenytoin. Serum concentrations of drugs metabolized by the cytochrome P450 system should be monitored closely in patients concurrently receiving erythromycin.

Carcinogenesis, Mutagenesis, Impairment of Fertility: The following *in vitro* mutagenicity tests have been conducted with clarithromycin:

Salmonella/Mammalian Microsome Test

Bacterial Induced Mutation Frequency Test

in Vitro Chromosome Aberration Test

Rat Hepatocyte DNA Synthesis Assay

Mouse Lymphoma Assay

Mouse Dominant Lethal Study

Mouse Micronucleus Test

All tests had negative results except the *in Vitro* Chromosome Aberration Test which was weakly positive in one test and negative in another.

In addition, a Bacterial Reverse-Mutation Test (Ames Test) has been performed on clarithromycin metabolites with negative results.

Fertility and reproduction studies have shown that daily doses of 150-160 mg/kg/day to male and female rats caused no adverse effects on the estrous cycle, fertility, parturition, or number and viability of offspring. Plasma levels in rats after 150 mg/kg/day were 2 times the human serum levels.

In the 150 mg/kg/day monkey studies, plasma levels were 3 times the human serum levels. When given orally after 150mg/kg/day, clarithromycin was shown to produce embryonic loss in monkeys. This effect has been attributed to marked maternal toxicity of the drug at this high dose.

In rabbits, *in vitro* fetal loss occurred at an intravenous dose of 33 mg/kg/m, which is 17 times less than the maximum proposed human oral daily dose of 6100 mg/kg/m.

Long-term studies in animals have not been performed to evaluate carcinogenic potential.

Pregnancy: Teratogenic Effects. Pregnancy Category C: Four teratogenicity studies in rats (three with oral doses and one with intravenous doses up to 160 mg/kg/day administered during the period of major organogenesis) and two in rabbits (at oral doses up to 125 mg/kg/day or intravenous doses of 30 mg/kg/day administered during gestation days 6 to 18) failed to demonstrate any teratogenicity from clarithromycin. Two additional oral studies in a different rat strain at similar doses and similar conditions demonstrated a low incidence of cardiovascular anomalies at doses of 150 mg/kg/day administered during gestation days 6 to 15. Plasma levels after 150 mg/kg/day were 2 times the human serum levels. Four studies in mice revealed a variable incidence of cleft palate following oral doses of 1000 mg/kg/day during gestation days 6 to 15. Cleft palate was also seen at 500 mg/kg/day. The 1000 mg/kg/day exposure resulted in plasma levels 17 times the human serum levels. In monkeys, an oral dose of 70 mg/kg/day produced fetal growth retardation at plasma levels that were 2 times the human serum levels.

There are no adequate and well-controlled studies in pregnant women. Clarithromycin should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus. (SEE WARNINGS).

Nursing Mothers: It is not known whether clarithromycin is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when clarithromycin is administered to a nursing woman. It is known that clarithromycin is excreted in the milk of lactating animals and that other drugs of this class are excreted in human milk.

Pediatric Use: Safety and effectiveness of clarithromycin in children (ages 12 years) of age have not been established.

Geriatric Use: In a steady-state study in which healthy elderly subjects (age 65 to 81 years old) were given 500 mg every 12 hours, the maximum concentrations of clarithromycin and 14-OH clarithromycin were increased. The AUC was also increased. These changes in pharmacokinetics parallel known age-related decreases in renal function. In clinical trials, elderly patients did not have an increased incidence of adverse events when compared to younger patients. Dosage adjustment should be considered in the elderly patients with severe renal impairment.

ADVERSE REACTIONS

The majority of side effects observed in clinical trials were of a mild and transient nature. Fewer than 3% of patients discontinued therapy because of drug-related side effects.

The most frequently reported events, whether drug-related or not were diarrhea (3%), nausea (3%), abnormal taste (2%), dyspepsia (2%), abdominal pain/discomfort (2%), and headache (2%). Most of these events were described as mild or moderate in severity. Of the reported adverse events, only 1% were described as severe.

In studies of pneumonia comparing clarithromycin to erythromycin base or erythromycin stearate, there were lower adverse events involving the digestive system in clarithromycin-treated patients, compared to erythromycin-treated patients (13% vs 32%, p< 0.01). Twenty percent of erythromycin-treated patients discontinued therapy due to adverse events compared to 4% of clarithromycin-treated patients.

The following adverse events have been reported with erythromycin products but not in clinical trials of clarithromycin.

Rarely, erythromycin has been associated with ventricular arrhythmias, including ventricular tachycardia and torsades de pointes, in individuals with prolonged QT intervals.

Changes in Laboratory Values: Changes in laboratory values with possible clinical significance were as follows:

Hepatic - Elevated SGPT (ALT) < 1%, SGOT (AST) < 1%, GGT < 1%, alkaline phosphate <1%, LDH < 1%, and total bilirubin < 1%.

Hematologic - Decreased WBC <1%, and elevated prothrombin time 1%. Renal - Elevated BUN 4%, and elevated serum creatinine <1%.

VALIUM® (diazepam/Roche) Ⓥ

Before prescribing, please consult complete product information, a summary of which follows:

INDICATIONS: Management of anxiety disorders, or short-term relief of symptoms of anxiety. Anxiety or tension associated with the stress of everyday life usually does not require treatment with an anxiolytic. Symptomatic relief of acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in skeletal muscle spasm due to reflex spasm to local pathology; spasticity caused by upper motor neuron disorders; athetosis; stiff-man syndrome; convulsive disorders (not as sole therapy).
The effectiveness of Valium in long-term use, that is, more than 4 months, has not been assessed by systematic clinical studies. The physician should periodically reassess the usefulness of the drug for the individual patient.
CONTRAINDICATED: Known hypersensitivity to the drug. Children under 6 months of age. Acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.
WARNINGS: Not of value in psychotic patients. Caution against hazardous occupations requiring complete mental alertness. When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increased dosage of standard anticonvulsant medication; abrupt withdrawal may be associated with temporary increase in frequency and/or severity of seizures. Advise against simultaneous ingestion of alcohol and other CNS depressants.
***Usage in Pregnancy:* Use of minor tranquilizers during first trimester should almost always be avoided because of increased risk of congenital malformations as suggested in several studies. Consider possibility of pregnancy when instituting therapy; advise patients to discuss therapy if they intend to or do become pregnant.**
Withdrawal symptoms of the barbiturate type have occurred after discontinuation of benzodiazepines (see Drug Abuse and Dependence).
PRECAUTIONS: If combined with other psychotropics or anticonvulsants, consider carefully pharmacology of agents employed; drugs such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants may potentiate its action. Usual precautions indicated in patients severely depressed, or with latent depression, or with suicidal tendencies. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation.
The clearance of Valium and certain other benzodiazepines can be delayed in association with Tagamet (cimetidine) administration. The clinical significance of this is

VALIUM® (diazepam/Roche)

unclear. Inform patients to consult physician before increasing dose or abruptly discontinuing diazepam.
SIDE EFFECTS: Drowsiness, confusion, diplopia, hypotension, changes in libido, nausea, fatigue, depression, dysarthria, jaundice, skin rash, ataxia, constipation, headache, incontinence, changes in salivation, slurred speech, tremor, vertigo, urinary retention, blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances, stimulation have been reported; should these occur, discontinue drug. Isolated reports of neutropenia, jaundice; periodic blood counts and liver function tests advisable during long-term therapy.
Drug Abuse and Dependence: Withdrawal symptoms similar to those noted with barbiturates and alcohol have occurred following abrupt discontinuation of diazepam; more severe seen after excessive doses over extended periods; milder after taking continuously at therapeutic levels for several months. After extended therapy, avoid abrupt discontinuation and taper dosage. Carefully supervise addiction-prone individuals because of predisposition to habituation and dependence.
DOSAGE: Individualize for maximum beneficial effect. *Adults:* Anxiety disorders, symptoms of anxiety, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d. to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).
HOW SUPPLIED: For oral administration, round, scored tablets with a cut out "V" design—2 mg, white; 5 mg, yellow; 10 mg, blue—bottles of 100 and 500. Tel-E-Dose® packages of 100, available in boxes of 4 reverse-numbered cards of 25, and in boxes containing 10 strips of 10.

Triage
Improving telephone triage. 9/15:34-39 (PB)
Making phone care good care. 12/15:103-117
***Trichomonas* infections**
Managing problem vaginitis. 9/15:137-152 (Correction 12/15:24)
Tuberculosis
It wasn't hepatitis, it wasn't pneumonia. 4/15:203-206 (C)
TB: Coming soon to your town? 5/15:40-66
Rural views on TB testing. 7/15:17 (L)
Brain lesions in a patient with risk factors for AIDS. 12/15:175-178 (C)
Typhus, endemic flea-borne
Febrile disease with rash. 9/15:200-203 (C)

U

Ultraviolet therapy
Waging war on psoriasis. 5/30:145-175
Urinary incontinence
Urinary incontinence: Missed and mishandled. 6/15:49-52 (E)
Managing urinary incontinence in women. 7/15:79-112
Urinary tract infections
Complicated urosepsis. 2/15:254-256 (C)
Recurrent UTI: Who should treat herself? 7/15:259-270

Urinary tract infections *continued*
The fine points of prostatitis care. 9/15:91-107
Safe sex and UTI self-treatment. 10/15:18 (L)
Uncomplicated UTI: Keep it simple. 10/30:12-13 (L)
Uterine hemorrhage
Managing dysfunctional uterine bleeding. 5/15(suppl):2-11
Uveal diseases
The eye in systemic disease 1: Anterior structures. 4/15:162-174

V

Vaccines
The ABCs of viral hepatitis. 8/15:34-50
Update on adult immunization. 9/30:113-123
Vaginitis
Managing problem vaginitis. 9/15:137-152 (Correction 12/15:24)
Vaginosis, bacterial
Managing problem vaginitis. 9/15:137-152 (Correction 12/15:24)
Vasectomy
Vasectomy with scalpel doesn't cut it. 2/15:23-24 (L)
***Vibrio* infections**
Done in by a bluefish. 12/15:180-182 (C)
Virus diseases
Viral infections—making the diagnosis. 10/15:157-184
Using today's antivirals. 11/30:28-48
Viruses
Viral infections—making the diagnosis. 10/15:157-184
Vitamin C see **Ascorbic acid**
